

ISOTONIX MULTI-TECH™

(Value Size 90 Servings/Bottle)

MULTITECH™

MultiVitamin/Mineral Formula provides 100% of the essential vitamins and most minerals. This product should be taken daily in addition to your dietary regimen.

How many of us sit down at home to three complete & balanced meals a day? Modern processing and preparation techniques often rob foods of vitamin content, as can growth, harvest, and storage conditions.

We often come up short. It is up to us to make up the difference with supplements.

Life cannot be sustained without all the essential vitamins.

What are vitamins?

A vitamin may be broadly defined as a substance that is essential for the maintenance of normal metabolic function, but which is not produced in the body and therefore must be consumed from a sources outside the body.

Vitamins are necessary elements in the process of converting food to energy and in the growth and repair of body tissue reduction of vitamin levels over extended periods can result in vitamin deficiency. These shortages may lead to symptoms, which can include loss of appetite, loss of body weight, increased irritability, and sleeplessness or constant drowsiness. Deficiencies of this nature can be easily be reversed by adequate vitamin intake.

How important are minerals?

As important as vitamins are, they are useless without minerals. Minerals provide a vital role in nutrition. Although there is rarely much discussion about the benefits they provide, minerals are considered the "unsung" heroes of nutrition. Virtually no nutritional benefit from the various vitamins including antioxidant, fiber, and protein, would be possible without the assistance of one or more key minerals.

There are a number of vital roles that minerals play in the body. It is their non-organic components that initiate the metabolism of protein, carbohydrates, and lipids. In addition to their assistance in the metabolic process, minerals aid the regulation of water and electrolyte balance. Minerals are also pivotal in providing a sound skeleton, and regulating the functions of our muscles and nerves. Minerals are absolutely essential for sustaining good health and life.
